

KOM NETWORKS

pioneers of virtualization

KOM NETWORKS

Information is power; in today's economy, control of information delivers both power, and profit, as well. We at KOM NETWORKS believe storage is the network. Successful enterprises recognize the value of fast, efficient and secure data-management. KOM NETWORKS supplies sophisticated data-storage strategies for competitive enterprises.

KOM NETWORKS is a world-leading developer of open-storage networking solutions and virtual-storage management strategies. For over three decades, KOM NETWORKS has been setting the standard for data storage by pioneering effective processes and solutions. Competitors are still struggling to emulate the numerous sophisticated functions and features created by KOM NETWORKS.

Today, KOM NETWORKS continues to break new ground with innovative, scalable storage solutions. Whether it's a blueprint for building a Lego™ submarine, or a map of celestial bodies as observed by NASA's Hubble Space Telescope, enterprises the world over trust their data to KOM NETWORKS.

Designing Sophisticated Strategies

KOM NETWORKS' software solutions enable organizations to manage data storage faster and more efficiently than ever before. KOM NETWORKS designs progressive strategies that:

- Support unlimited hardware configurations
- Integrate seamlessly with key platforms
- Enhance the performance of systems, devices and media
- Optimize the utilization of all components of a network
- Incorporate next-generation technologies into existing storage infrastructure

Pioneering Effective Solutions

Originally established in 1969 to service DEC-based computer systems, KOM NETWORKS devised many of the technologies that make today's powerful

applications feasible. KOM NETWORKS foresaw the crucial role that reliable, secure storage systems would play in today's information age. By developing flexible, effective solutions that enable enterprises to control and protect mission-critical data, KOM NETWORKS earned a leading position in the data-storage market.

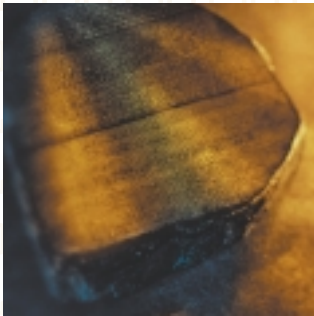

In the early 1980s, KOM NETWORKS streamlined the storage process by pioneering the use of Ablative WORM devices as standard hard disk drives. These first-generation products not only simplified the storage process, but also integrated a highly efficient storage option into operating systems.

Meeting Complex Challenges

Ten years ago, KOM NETWORKS was already satisfying the storage needs of a long list of hardware and software manufacturers, vendors, resellers and distributors around the world. KOM NETWORKS has emerged as a world leader in the design and development of virtual-storage management strategies. KOM NETWORKS enables customers to meet the stringent regulatory mandates of such bodies as the SEC, FDA, FAA and DoD.

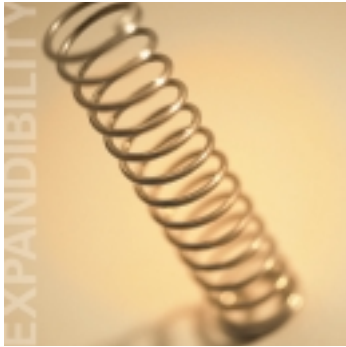

KOM NETWORKS' customer-driven product design ensures data and networks are:

- Manageable
- Available
- Scalable
- Secure

The Egyptians pioneered information storage with the Rosetta Stone. It stored information for decoding hieroglyphics.

The Storage Experts™

- *Powerful, innovative technologies that deliver long-term strategies.*
- *Capacity to manage up to 500 petabytes of data.*
- *World-leading expertise in virtual-storage management.*
- *Exceptional standards of customer service and product support.*

Exceeding Future Requirements

For more than three decades, KOM NETWORKS has focused on delivering long-term strategies that resolve the growing needs of its customers. KOM NETWORKS pioneers solutions that protect the integrity of data and enable customers to efficiently manage all aspects of data storage. All KOM NETWORKS products are designed to integrate not only with current technologies, but also with emerging technologies.

Our software solutions support the broadest scope of available hardware:

- Hard Disk Drives (JBODs)
- RAID
- Magneto-Optical, (WORM and Rewritable)
- Ablative 12" WORM
- DVD-RAM, DVD-ROM
- CD-ROM

KOM NETWORKS' technical expertise is based on a thorough understanding of all major storage devices and enterprise-network functionality. This know-how is embedded within the design of every KOM NETWORKS solution.

Our products integrate seamlessly across the full range of platforms on the market:

- Windows NT / 2000™
- UNIX (Compaq Tru 64™, Sun Solaris™, Hewlett-Packard HP-UX™)
- Open VMS™

Putting Customers First

Customers and partners are top priority. At KOM NETWORKS we continue to set the industry standard for customer support by providing around-the-clock access to our dedicated, knowledgeable team of experts.
